

UPDATE INTERNET RADIO

Theory and Application

INTRODUCTION

As the previously used internet radio provide *vTuner* is no longer available, T+A is offering a software update that allows the affected devices to access the provider *Airable* with immediate effect.

Depending on the device type and software version, the update can be carried out either via the web update function or using a USB storage stick.

Please follow the relevant instructions, which are available for download on the T+A website: (<https://www.ta-hifi.de/en/airable-radio-legacyprodukte/>)

NOTES

- The software update ensures that all necessary requirements are met within the streaming module to communicate with the new streaming service provider. Unfortunately, any presets stored on the device may not be automatically adjusted.
- The development of the ASA G1 streaming module generation took place at a time when streams and podcasts from internet radio stations were still transmitted without encryption. For this reason, the ASA G1 streaming modules, due to their design, do not support encrypted transmission (HTTPS). Consequently, streams or podcasts that are only available in an encrypted format cannot be played.

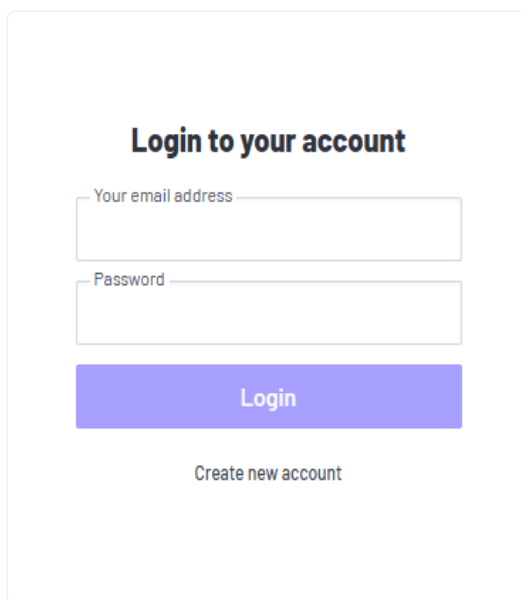

If the device does not function as expected after the update, we recommend resetting it to factory settings. To do this, please open the software update menu (see the update instructions) and select either *Reset* or *Reset for Region*, depending on your device.

NEW FUNCTIONS

The internet radio service *airable* not only offers new categories but also allows you to conveniently create your own favourites.

To do this, you first need to create an account. Please follow these steps:

- Open the website <https://airable.fm/> in your browser on any PC
- Click on *Create new account*

The screenshot shows a login dialog window with the following elements:

- Title:** Login to your account
- Input fields:** Two text input fields, the first labeled "Your email address" and the second labeled "Password".
- Buttons:** A prominent blue "Login" button and a smaller, lighter blue "Create new account" link below it.

- Enter a valid email address and a password in the dialog window that opens (the password must be at least 8 characters long and include at least one lowercase letter, one uppercase letter, and one special character).

[Login to your account](#)

Then, a view will open where you can manage your device and create new favourites. To use these functions, you must first connect your T+A device.

Please proceed as follows:

- First, select Device Management by clicking on the Devices tab.

The screenshot shows a web browser window with the URL <https://www.airable.fm/devices>. The page has a navigation bar with 'Your content', 'Stations', 'Podcasts', and 'Devices' (highlighted). On the right, there are links for 'Your account' and 'Logout'. The main content area is titled 'Connected devices' with a '1/20' badge. Below this, a device card for 'Cala' is shown, including the T+A logo, 'Internet Radio', 'Supports: AAC, MP3', and a 'Cala' label. To the right of the device name are 'Remove' and 'Support' buttons. Below the device list, there is a 'Connect code:' section with a 'Code' input field and a 'Connect' button. A yellow button with a question mark icon and the text 'How to find my connect code?' is positioned below the 'Connect' button.

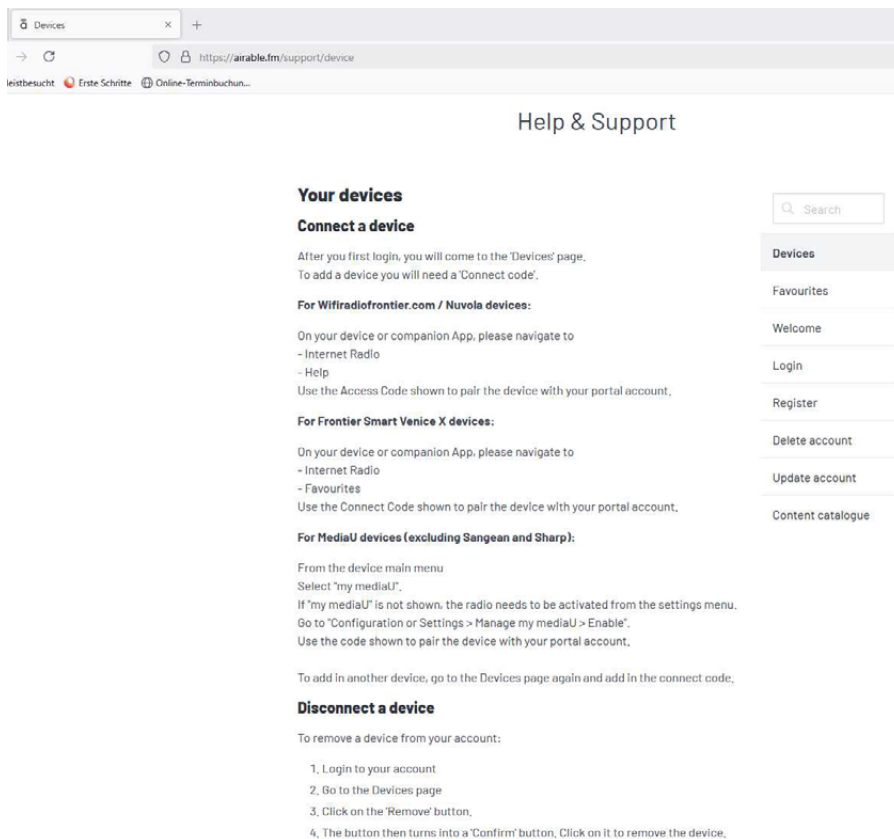

- Then, on your device or in the T+A Music Navigator G1 app, select the Internet Radio source, navigate to the Help entry, and open it
- Please enter the code displayed there into the Code field on the open webpage and confirm it by clicking on Connect

- After that, your device will be listed among the connected devices.

To add favourites, please select the Stations or Podcasts category and choose the desired stream. Further information can be found under Help & Support.

An overview of the added favourites can be found in the Your Content category. Additional information is also available under Help & Support.
